

Laminide has been scientifically developed to maintain the healthy functioning of circulatory & physiological systems. Derived from botanical Feverfew, Parthenolide is a biologically active compound which is used to support migraines in people. It supports the blood flow to the laminae & throughout the hoof capillary bed.

Why should I feed Laminide to my horse?

Laminide offers targeted nutritional support for laminitic prone horses & ponies to support circulation within the hoof.

- ✓ **Highly palatable**
- ✓ **Low sugar**

A complementary feeding stuff for horses

ANALYTICAL CONSTITUENTS:

Protein	40%
Fat	5%
Crude fibre	5%
Ash	6%
