

BOVIVET RUMEN DRENCHING SYSTEM MARK II

The BOVIVET Rumen Drenching System Mark II is developed for efficient and controlled administration of fluids directly into the rumen of cattle.

Ideal for:

- Rehydration therapy
- Administration of calcium solutions
- Prevention and treatment support of milk fever
- Ketosis management post-calving

The system allows administration of up to 50 litres of body-temperature water when used with the dedicated pump.

The Rumen Drenching System has a large number of unique features:

Supplied with durable stainless metal cup (40 mm mounted + 32 mm included) designed to minimize trauma to the pharynx and oesophagus during repeated use.

Manufactured in medical-grade polyurethane:

- Extremely smooth surface
- High flexibility with strength
- Resistant to common disinfectants
- Easy to clean

The tube is constructed without internal steel wire reinforcement, which can cause a long-term trauma risk.

Compatible with BOVIVET Special Stomach Pump (Cat. No. 190190):

- Double-action mechanism
- 650–700 ml per stroke
- Approx. 20 L per minute
- Full metal construction

Eliminates common failures seen with plastic pumps

BOVIVET Rumen Drenching System Mark II includes:

- Metal cup 40 mm (mounted)
- Metal cup 32 mm
- Polyurethane tube
- Protective tubing
- Bull nose clamp 11 cm (Cat. No. 210380)
- Coupling with patented quick-release connection

190180

Designed for professional veterinary and livestock use

The stomach pump must be ordered separately.
