

OUR MUSCLE MAKERS IN COMPARISON

How do DERBY® Aminotop, DERBY® Vital and DERBY® Pro Performance differ in their use?

DERBY® AMINOTOP

Supplementary feed for horses to promote muscle building

DERBY® Aminotop is for all horses where the supply of essential amino acids is paramount; the amino acids ensure the building, supply and maintenance of muscle mass.

- ★ AMINO ACID CONCENTRATE
- ★ SUPPORTS MUSCLE GROWTH
- ★ PROMOTES STRENGTH AND LETTING GO

Feeding recommendations:
Daily amounts in grams/day for amino acid supply as a Supplement to balanced concentrate rations with sufficient roughage.

Horses (600 kg)	Ponys (300 kg)	Breeding mares (600 kg) High Trained.	Broodmares (600 kg) lactation month
200 g / Tag*	100 g/Tag*	200 g/Tag**	400 g / Tag**

Our DERBY® Aminotop is used in significantly smaller quantities than DERBY® Vital, up to 200 g for a sport horse. It provides highly concentrated amino acids that can be effectively utilized by the horse. Often, the content of essential amino acids in the ration is insufficient for muscle development. By using Aminotop, you can support muscle development without affecting the overall ration in terms of energy and mineral content. However, not only sport horses require a balanced supply of amino acids, but also breeding horses, for whom Aminotop can also be used.

DERBY® Vital is the pelleted all-rounder for enhancing the daily feed ration. Corn, brewer's yeast, linseed, and the high vitamin and trace element content make it a valuable addition to existing rations. The high nutrient content benefits the vitality, fertility, and performance of horses. Vitamin E promotes a loose lump.

Muscles. DERBY® Vital can provide that extra boost of energy while simultaneously supporting muscle development. For performance horses, this can amount to up to 1 kg in their daily ration.

If the ration requires not only additional protein but also fat, DERBY® Pro Performance is the right choice. This supplement also requires only a small amount of up to 300 g/day. Its main component is linseed, which also has a positive effect on the coat and fur. Due to its low sugar and starch content, DERBY® Pro Performance is also suitable for horses with sensitive digestive systems.

Composition

Wheat gluten feed; 15,5 % threonine; 9,7 % sunflower meal; 9,4 % lysine; 8,7 % methionine; dextrose; lucerne meal; 4,0 % linseed meal; calcium carbonate; rape seed oil, refined; 2,72 % valine; 0,33 % tryptophan. Crude Protein: 38.80%, Crude Ash: 3.60%, Crude Fibre: 7.40%, Crude Fat: 5.70%, Calcium: 0.21%, Phosphorus: 0.34%.
