

Calf Paste

Healthy Calves
= Less Stress during rearing

Supplementary feed for calves.

Essential initial care with:

- Immunoglobulin-rich egg powder
- Probiotics
- Vitamins

Calf Paste

Calves are born without immunity. Because the quality of colostrum is often poor, even immediate ingestion of colostrum and thus antibodies can lead to an immunity deficit in the calf. During this period of immunity gap, the calf is particularly susceptible to illness, and yield losses occur due to sick, poorly growing, or deceased animals. Three-quarters of all calf losses are attributable to diarrhea.

Whole egg powder is a very rich source of natural immunoglobulins.

Specific antibodies from egg powder, used as a starter boost, strengthen newborn calves and provide them with precisely the elements they need to fight off diarrhea. This reduces treatment costs and prevents potential losses.

Dosage Calf Paste

	Dosage
Newborn calves	10 ml / animal / day for 3 days
In acute problem situations (stress, high germ pressure)	10 ml / animal / day for 3 days

Composition:

Soybean oil
Egg powder
Dextrose

Additives:

Vitamin A
Vitamin D3
Vitamin E
Vitamin C
Probiotic

Presentation:

6 x 30 ml in a carton
