

Coppasure 4g

"Long acting bolus containing 84% copper"

Benefits:

- Because of its high copper content it contributes to blood production and thus accelerates development.
- It is effective in eliminating digestive system parasites.
- It prevents the loss and paralysis of newborn lambs in sheep with copper deficiency.
- It prevents "Enzootic Ataxia" caused by copper deficiency

How to Use:

1 capsule per 50 kg should be used for all animals.

It is recommended to be used twice a year in animals with copper deficiency.

Giving one time to pregnant sheep in the first half of pregnancy prevents postpartum copper deficiency.

Attention:

- It should be used after the veterinarian's detection of copper deficiency and the required dose can be increased or decreased according to the situation.
- It should not be given to sheep that are over 4 months of pregnancy.
- During the process of using the product, copper should not be supplied from other sources.
- Care should be taken when using in breeds sensitive to copper.
- It should not be used in animals with underdeveloped rumen.
