

## FECONTONIC

### OPTIMISING FERTILITY

FECONTONIC prepares the organism to the oestrus and the reproduction, by promoting the development of the last follicular phase.

Mohave Yucca, beta-carotene and vitamins

### USES

|           | DOSAGE PER DAY | FREQUENCY                                         |
|-----------|----------------|---------------------------------------------------|
| Broodmare | 80 g           | Distributed before the fertilization, for 21 days |

### PRODUCT ADVANTAGES

- Contribute to develop the quality of the follicles to prepare the fertility (we act on the quality of the corps lutea)
- Contribute to Increase the follicular maturation to get a higher oocyte quality

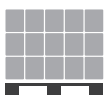

### TIPS FROM PASKACHEVAL

Begin supplementation 3 weeks before breeding to maximize fertility outcomes. Yucca, Beta-carotene and seaweed (Lithothamnion) help support overall metabolism and hormonal balance. Combining minerals like zinc and iodine ensures optimal support for the reproductive system.

### RAW MATERIALS

Monobasic calcium phosphate, Wheat milling, Sodium chloride, Sugar cane molasses, Magnesium oxide, Lithothamnion, Calcium carbonate, Rapeseed oil, Mohave Yucca
