HYALATHRON

Supplementary feed for horses to support the mobility - ADMR-compliant formula.

Hyaluronic acid is naturally the main component of synovial fluid (joint fluid), which lubricates the joint and protects the cartilage with a viscous layer. Hyaluronic acid is also a building block of joint cartilage and connective tissue.

The manganese contained in the product is actively involved in bone and cartilage formation as a cofactor. Methionine is an essential amino acid that has antioxidant properties and provides sulfur, which is necessary for cartilage regeneration. Antioxidant components from grapes and vitamin E round off the formula.

equinova® HYALATHRON LIQUID

COMPOSITION

Sugar, refined linseed oil, chondroitin sulfate, hyaluronic acid

ANALYTICAL CONSTITUENTS AND CONTENTS

63% moisture, 1.2% crude protein, 7.0% crude fat, 0.0%, crude fiber, 2.1% crude ash

NUTRITIONAL ADDITIVES PER KG

8 g lysine as L lysine monochloride (3c322), 2 g DL-methionine (3c301), 5,000 mg vitamin E (3a700i), 231 mg copper as glycine copper chelate, hydrate (3b413), 400 mg manganese as glycine manganese chelate hydrate (3b506), 1500 mg zinc as glycine zinc chelate hydrate (3b607)

SENSORY ADDITIVES

1,000 mg dried grape extract (2b485)

TECHNOLOGICAL ADDITIVES

2,220 mg sorbic acid from potassium sorbate (1k202), 995 mg citric acid (1a330)

Feeding recommendation per 100 kg body weight per day
ADMR-COMPLIANT RECIPE

HYALATHRON LIQUID

Long-term feeding: 5 ml

Short-term feeding: 10 ml

TIP: Feeding should be done daily for at least 30 days in a row.
