

## PASKAFOAL

### PELLETED MILK

**PASKAFOAL is a pelleted milk supplement especially formulated for foals.**

It has been designed to supply the foal from its first days of life up to 8 months of age. It completes the rations of young foals thanks to high-quality proteins (whey, soy, ...) and essential nutriment (Zn/Cu = 2,4), and thus enhances their optimal growth. PASKAFOAL is enriched with FOS, MOS and live yeast, which improve the digestibility of fibres thanks to the balance of the gut flora. Paskafoal optimises the solid feed intake.

BREEDING

Bamboo, echinacea,  
whey, probiotics &  
prebiotics

### USES

|                                | DOSAGE PER DAY PER DAY |
|--------------------------------|------------------------|
| First month                    | 50-60 g                |
| From the 2 <sup>nd</sup> month | 120 g                  |
| From the 3 <sup>rd</sup> month | 150 g                  |
| Between 3 & 7 month            | 250 g                  |
| From the 8 <sup>th</sup> month | 300 g                  |

Quantities need to be adjusted according to the milk production of the broodmare.

### PRODUCT ADVANTAGES

- › Supports immunity
- › Balances gut flora and assimilation
- › Contributes to bone strengthening
- › Balances the diet

### TIPS FROM PASKACHEVAL

Newborn foals rely solely on their mother's milk for nutrition, which is crucial for their growth and development. As they mature, they begin to consume forage and grain, reducing their dependency on milk. By the fourth month, milk provides less than 30% of the foal's energy needs, and the foal gradually shifts to solid food as it approaches weaning at 5-6 months.

### RAW MATERIALS

Whey, cooked soybeans, palm oil, wheat flour, oat flakes, dead yeast, **bamboo, echinacea**, limestone

| Additives (/kg)                                |           | Additives (/kg)                                             |                | Nutritional values (%) |        |
