DERBY Zinc + C

Supplementary feed with organic zinc compound to compensate for ration-related deficiencies

DESCRIPTION

DERBY® Zinc + C is a supplementary feed for horses to compensate for ration-related zinc deficiency. Thanks to its organic binding, the zinc is readily absorbed by the horse. Zinc is a component of over 200 enzymes and, as a cofactor, regulates important metabolic processes such as the hormonal and immune systems. While horses typically produce vitamin C naturally year-round, targeted supplementation with vitamin C ensures immune system support in all situations. However, zinc's role in cell regeneration in young horses and cell renewal in adult horses is far more important and directly visible. Skin metabolism and coat growth are the most prominent examples of its effects.

FEEDING RECOMMENDATION

(Daily amounts in grams/day to balance zinc requirements as a supplement to non-vitaminized and mineralized rations with sufficient roughage)

Horses (600 kg) 25 g/day*

Ponies (400 kg) 15 g/day*

*Please calculate the zinc supply from your horses' basic ration (roughage/concentrates, possibly pasture) when supplementing with this amount.

ANALYTICAL CONSTITUENTS

6.7% crude protein, 1.36% crude fat, 2.25% crude fiber, 26.7% crude ash, 2.3% calcium, 0.13% phosphorus, 5.0% sodium, 0.09% magnesium

COMPOSITION

Dextrose, brewer's yeast bound to spent grain (20%), sodium chloride, diatomaceous earth (5.2%), calcium carbonate, refined rapeseed oil

ADDITIVES PER KG

Nutritional additives:

10,000 mg glycine zinc chelate, hydrate (3b607), 10,000 mg vitamin C (3a300)

Technological additives: 52,000 mg sepiolite (diatomaceous earth) (E562)
